

Re: NAB's petition 04-160 This is to express my support of satellite radio, and it's ability to provide quality public services programming coast to coast. Traffic and weather information is essential to the traveler who uses the national Interstate highway system. Local broadcasters do not provide adequate travel and weather information to the traveler who is passing through a region. Satellite radio offers a uniform information service to the long distance transportation and touring public that is not available from any other medium. Do not restrict this valuable use of new technology.

I respectfully request the FCC to reject Petition 04-160.
